DBMS
Theory Assignment 2

24010100 40
Aadya
Diwan

Section - A

1. Entity Relationship (ER) diagram
2. Relational model
3. Object - oriented model
4. Integrity Constraints

Section - B

Q2 Data abstraction means hiding complex database details & showing only necessary information to users

In a healthcare system, data abstraction helps doctors, nurses & administrators access patient information easily without dealing with complex database structures.

How it simplifies interaction

1. Simplified interface
2. Improved efficiency
3. Role-based access
4. Data security
5. Reduced complexity

Thus data abstraction makes patient record management efficient, secure & easy to use

Q3 Benefits.

1. Ease of use - Healthcare professionals can access information without technical database knowledge

2. Improved data security - sensitive patient data is protected by restricted access

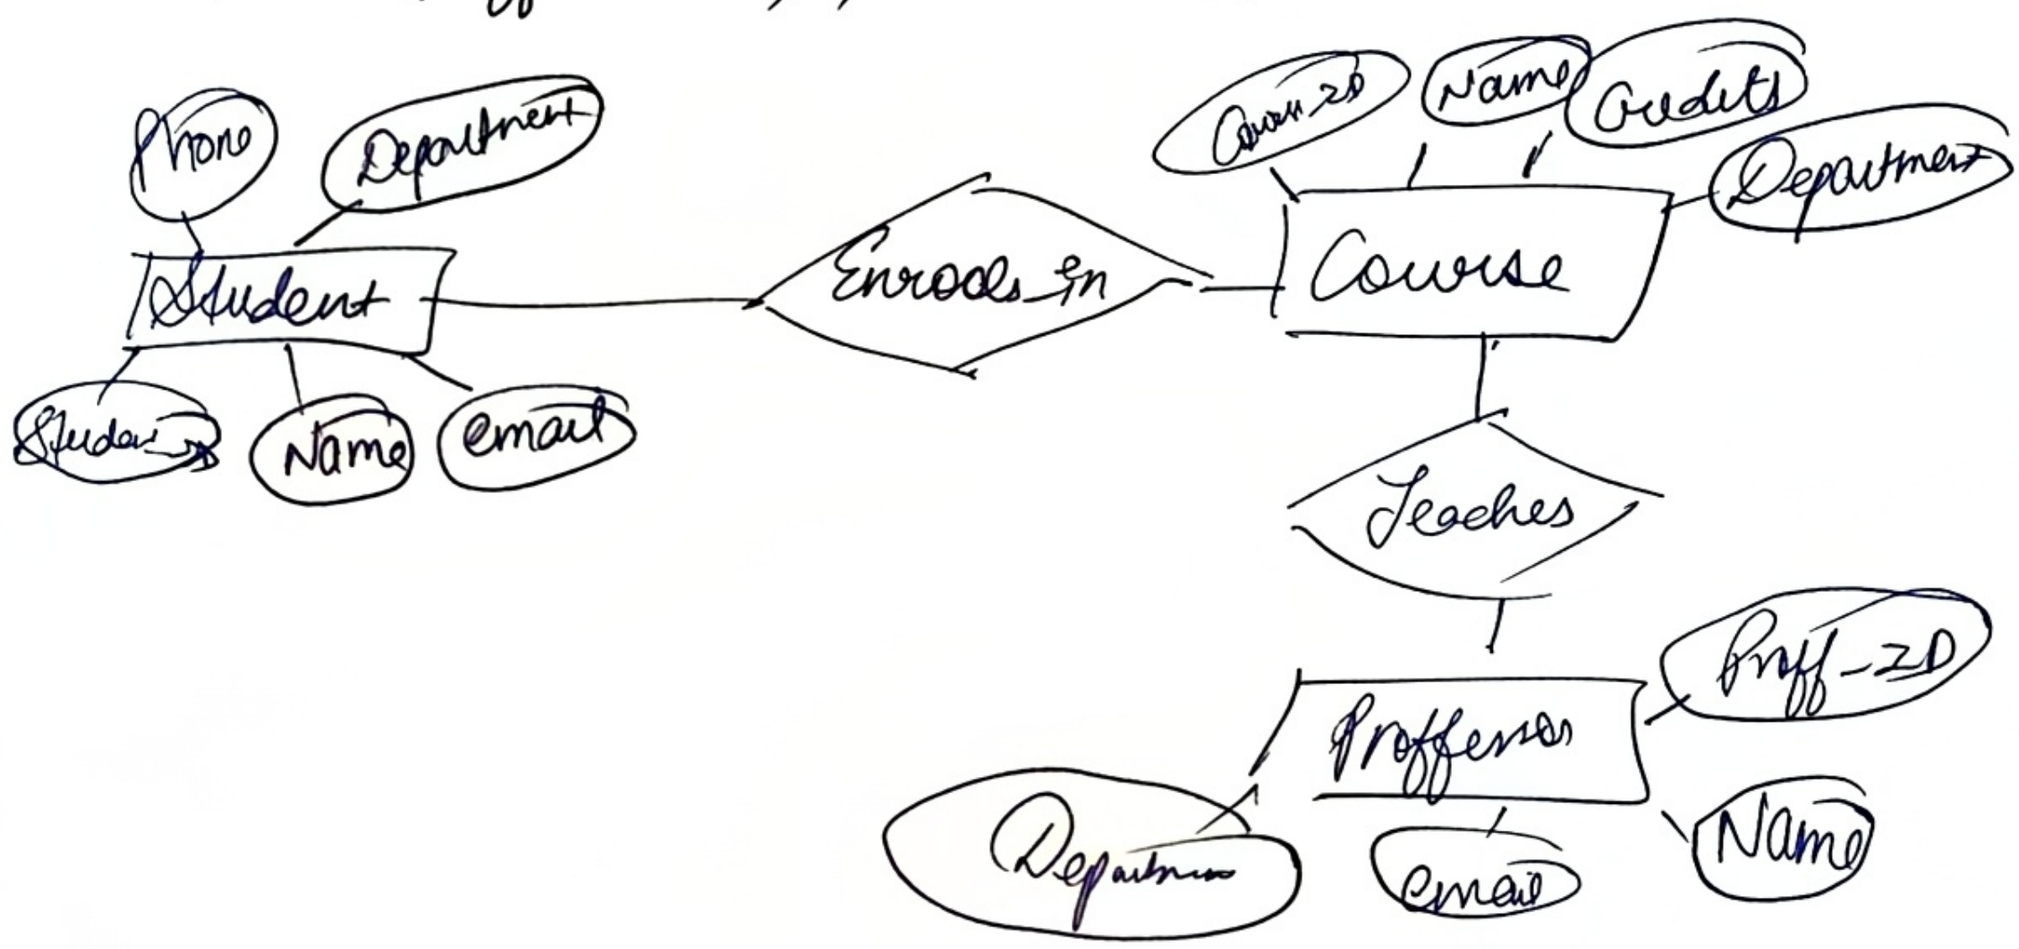
3 Data Consistency - Abstraction ensures that all views view consistent & accurate information

4 Better system maintenance - Database changes can be made internally without affecting users

5. Improved efficiency in healthcare operations - Quick access to patient records help doctors make faster decision

Challenges

1) Implementation Complexity
2) Performance Overhead
3) High development cost
4) Security risks if poorly implemented
5) Training requirements

(Section - c)


Student (Student_ID (Pk), Name, Email, Phone, Department)
Course (Course_ID (Pk), Name, Credits, Department)
Professor (Proff_ID (Pk), Name, Department)
